— OF THE WEEK —

REVOLUTIONIZING HOSPITAL RECORDS WITH THE TOUCH OF SIMPLICITY

In the bustling corridors of Indian hospitals, where every second counts and patient care is paramount, a quiet revolution is taking place. Meet DScript, the brainchild of Unriddle Technologies, a Shivamogga-based startup that's transforming how hospitals manage patient records without disrupting the workflows that healthcare professionals have trusted for decades.

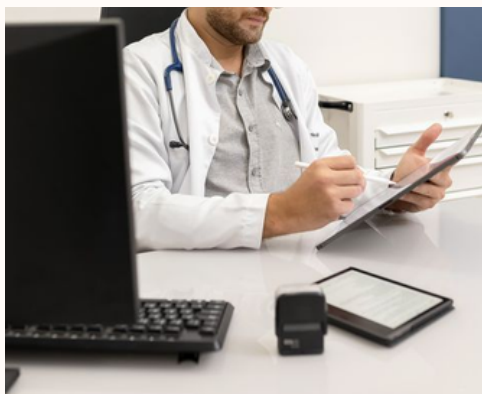

Founded by Akshay V Nayak and Karthik B S, two visionary entrepreneurs who understood a fundamental truth: hospitals don't resist digital transformation because they don't want it, they resist it because most digital solutions make their lives harder.

The Familiar Made Digital

Picture this: a doctor walks into a patient's room, picks up a tablet and stylus, and begins writing notes exactly as they would on paper. The handwriting flows naturally, the interface responds intuitively, and within seconds, those notes are digitized, organized, and instantly accessible to the entire care team. This is DScript where the art of traditional documentation meets the power of modern technology. The genius lies in its simplicity. Unlike complex Electronic Medical Record (EMR) systems designed for Western healthcare settings, DScript was built specifically for Indian hospitals.

Impact That Speaks Volumes

Since its launch just 10 months ago, DScript has achieved remarkable milestones that speak to its real-world impact. The platform has digitized over 16 lakh paper sheets across 15 hospitals in Karnataka, including major cities like Bengaluru, Shivamogga, Davanagere, Chitradurga, and Haveri. This expansion happened largely through word-of-mouth, the strongest testament to a product that truly works. The numbers tell a compelling story: hospitals using DScript have reduced operational costs by up to 60%, dramatically cut patient discharge times, and freed up valuable space previously used for physical file storage.

With a gross revenue of ₹65 lakhs in just 10 months, Unriddle Technologies is poised for significant expansion. The team is developing an Outpatient Department (OPD) version of DSCRIBE and eyeing expansion into new Indian cities and international markets where hospitals face similar barriers to digital adoption.

The recently launched AI-powered discharge summary module represents the next frontier—automatically drafting comprehensive summaries that save clinicians hours of work while ensuring accuracy and compliance. This feature showcases how artificial intelligence can enhance, human expertise in healthcare.

Beyond Cost Savings: A Greener Tomorrow

DSCRIBE's impact extends beyond hospital walls. By eliminating paper-based records, the platform contributes significantly to environmental sustainability. Every digitized sheet represents a step toward reducing the healthcare sector's carbon footprint a mission that resonates with the growing global emphasis on sustainable healthcare practices.

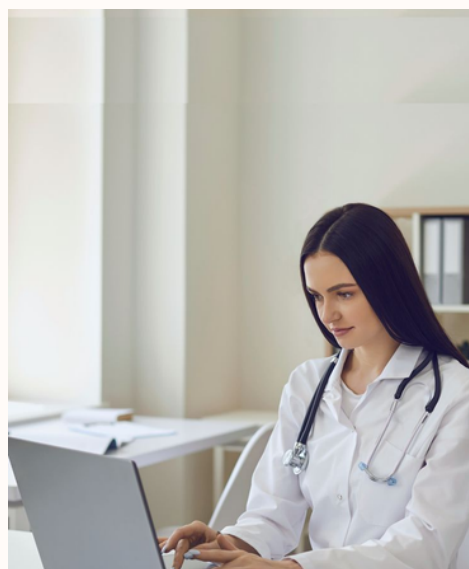

The startup's journey from concept to execution reflects the power of grassroots innovation. Incubated at the Anvesana Innovation and Entrepreneurial Forum on the PES Campus in Shivamogga, DSCRIBE exemplifies how local talent can address global challenges with solutions tailored to regional needs.

A Vision Realized

As patient loads and paperwork grow, DSCRIBE brings relief with seamless, non-disruptive digital transformation. Its power lies in simplicity revolution without confusion. For founders Akshay and Karthik, success is a nurse smiling over saved time and a doctor accessing records instantly, while families benefit as care becomes faster and more coordinated. DSCRIBE isn't just digitizing hospitals it's humanizing healthcare with technology that feels personal.

The future of healthcare documentation is here, and it writes just like paper-but powers like the digital age.
